1.INTRODUCTION:-

1.1.PROJECT OVERVIEW:-

Child tracker helps the parents in continuously monitoring the child's location. They can simply leave their children in school or parks and create a geofence around the particular location. By continuously checking the child's location notifications will be generated if the child crosses the geofence. Notifications will be sent according to the child's location to their parents or caretakers. The entire location data will be stored in the database.

1.2.PURPOSE:

The novelty of the work is that the system automatically alerts the parents/caretaker by sending SMS, when immediate attention is required for the child during emergency

2.LITERATURE SURVEY:-

2.1.EXISTING PROBLEM:

Nowadays, there are many projects for child safety Monitoring only .But we exploit the IoT device for monitoring the location and also parents can

create the geofence they wish ,the SMS is sent to the parents if the child crosses the geofence.

2.3.PROBLEM STATEMENT AND DEFINITION:-

The overall percentage of child abuse cases filed recently in the world is about 80%, out of which 74 percent are girl children and the rest are boys. For every 40 seconds, a child goes missing in this world. Children are the backbone of one's nation, if the future of children was affected, it would impact the entire growth of that nation. Due to the abuse, the emotional and mental stability of the children gets affected which in turn ruins their career and future. These innocent children are not responsible for what happens to them. So, parents are responsible for taking care of their own children. But, due to economic conditions and the aim to focus on their child's future and career, parents are forced to crave for money. Hence, it becomes difficult to cling on to their children all the time. In our system, we provide an environment where this problem can be resolved in an efficient manner. It allows parents to easily monitor their children in real time just like staying beside them as well as focusing on their own career without any manual intervention.

DEFINITION:-

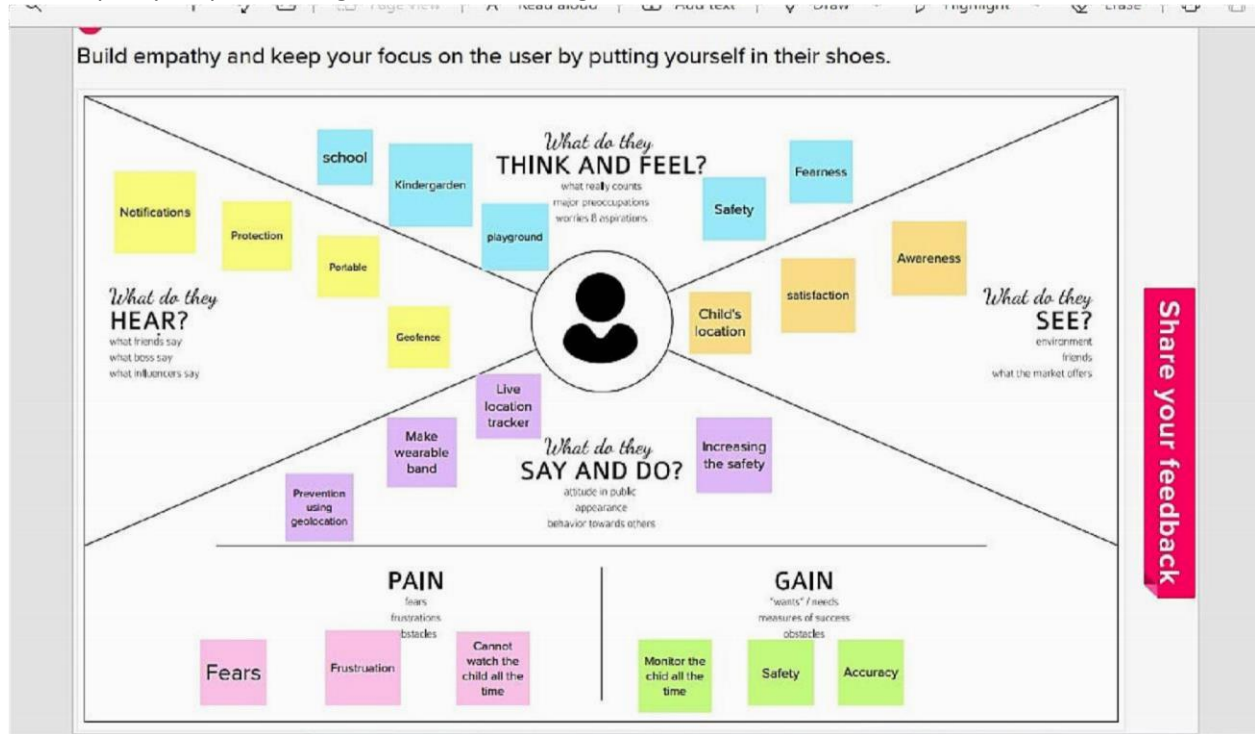

Child tracker helps the parents in continuously monitoring the child's location. They can simply leave their children in school or parks and create a geofence around the particular location. By continuously checking the child's location notifications will be generated if the child crosses the geofence.

- Notifications will be sent according to the child's location to their parents or caretakers.
- The entire location data will be stored in the database.
- If the child is in danger then it will send the alert or notification to their parents or caretakers.
- The alert can be sent to all the people who are updated in the process.
- If the device is missed somewhere then we can trace the location and rescue the device.

3.IDEATION AND PROPOSED SOLUTION:-

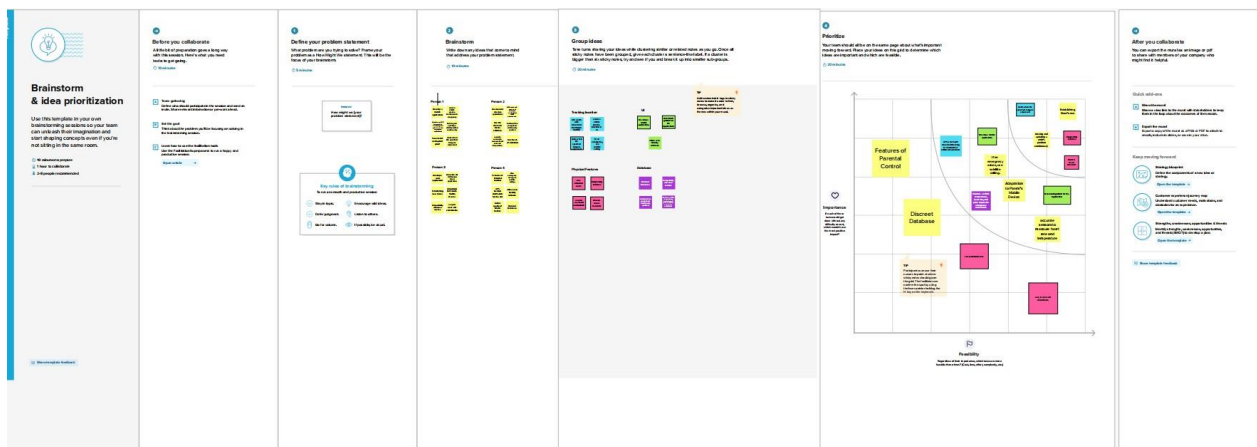

3.1.EMPATHY MAP CANVAS:-

Empathy map is to bridge the understanding of end user

3.2.IDEATION & BRAINSTORMING :-

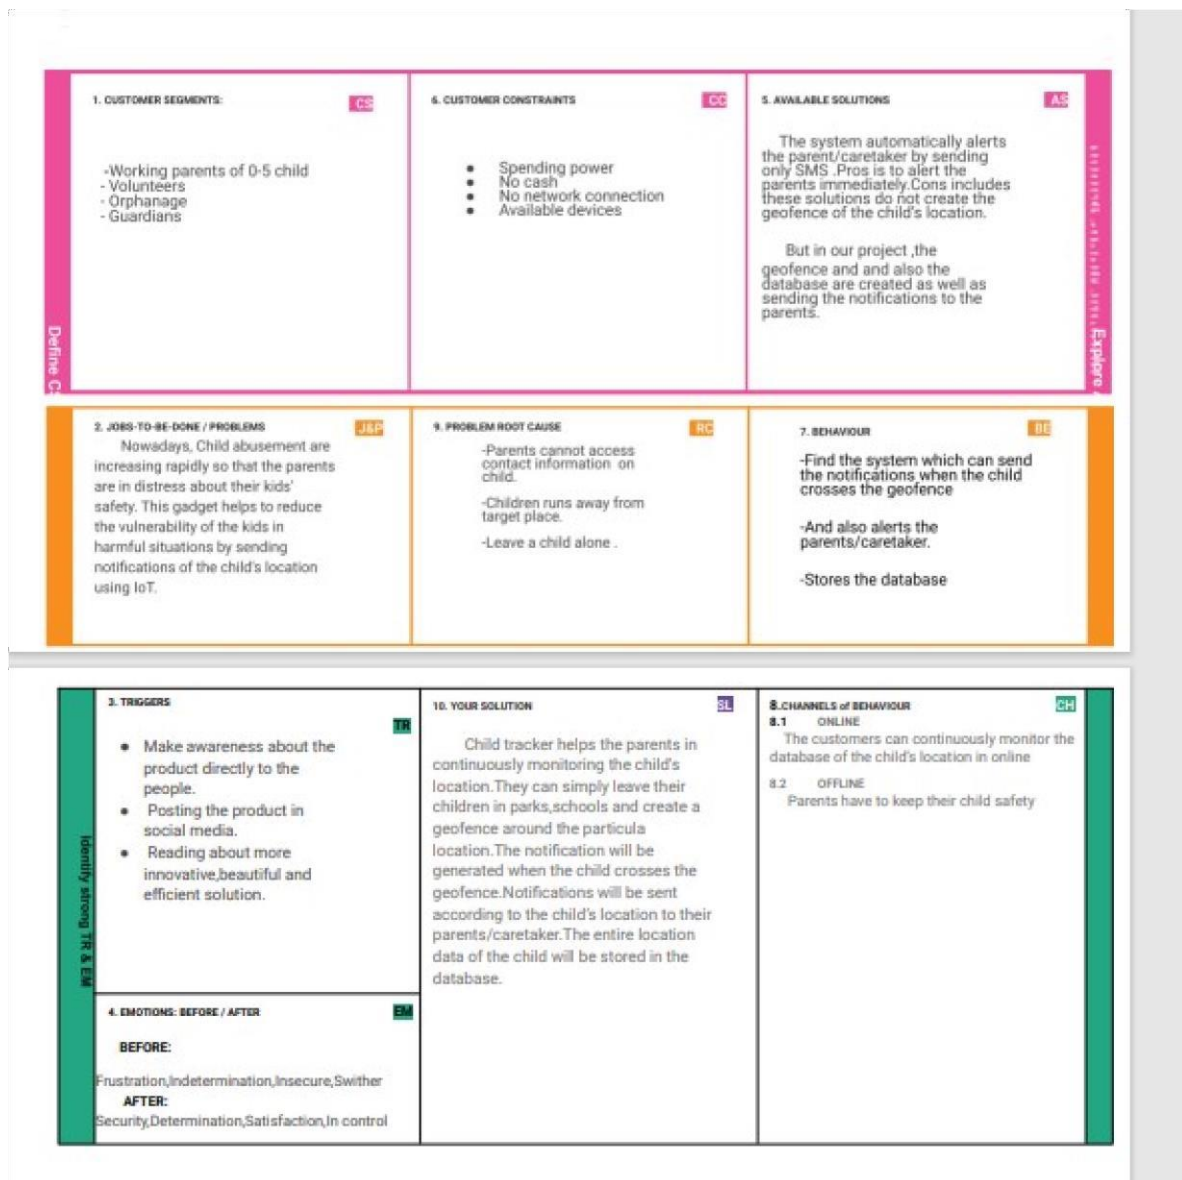

Ideation is a specific technique that is utilized to generate new ideas. Ideation is most commonly more thought of as being an individual pursuit, while brainstorming is almost always a group activity.

3.3.PROPOSED SOLUTION:

1	Problem Statement (Problem to be solved)	Nowadays,parents concern more about serious cases such as missing children,abduction and abuse. They cannot sit with their children or 24*7 hours to secure their children and monitor the children's activities
2	Idea / Solution description	Create a Child tracker which helps the parents in continuously monitoring the child's location. The notification will be sent according to the child's location to their parents or caretakers. The entire location data will be stored in the database.
3	Novelty / Uniqueness	The novelty of the work is that the system automatically alerts the parent/caretaker by sending notification,when immediate attention is required for the child during emergency
4	Social Impact / Customer Satisfaction	The parents may get the notification about whether the child reached the school or not
5	Business Model (Revenue Model)	<ul style="list-style-type: none"> ● Easy to use ● Low cost ● Weightless ● Compatible
6	Scalability of the Solution	<ul style="list-style-type: none"> ● Gadget ensures the safety and tracking of the children ● Parents need not worry about their children

3.4.PROPOSED SOLUTION FIT:-

4. FUNCTIONAL REQUIREMENTS:-

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)

FR1	User visibility	Emergency alerts via Fast SMS and through internet
FR2	User reception	Notifications will be sent to their parents if their child crosses the geofence and also the location of a child is stored in the database
FR3	User Understanding	Based on the values collected by the device, The user will understand that if they receive any SMS, then their child is in danger.
FR4	User action	If anything happens to the child, parent needs to take appropriate measures to help and make their feel children safe as soon as the alert received

NON FUNCTIONAL REQUIREMENTS:-

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	It be required to preclude children before being harmed, an autonomous real-time monitoring system is necessary for every child away from their parents.
NFR-2	Security	It be supposed to be designed to wearable without any problems. It would be weared by the children all the time and it should give assurance that it works all the time
NFR-3	Reliability	It should be actively being monitor the child and should send information to the parents all the time. It must recognize the danger caused to the child immediately.
NFR-4	Performance	Notification will be sent to the parents if the child crosses the geofence.

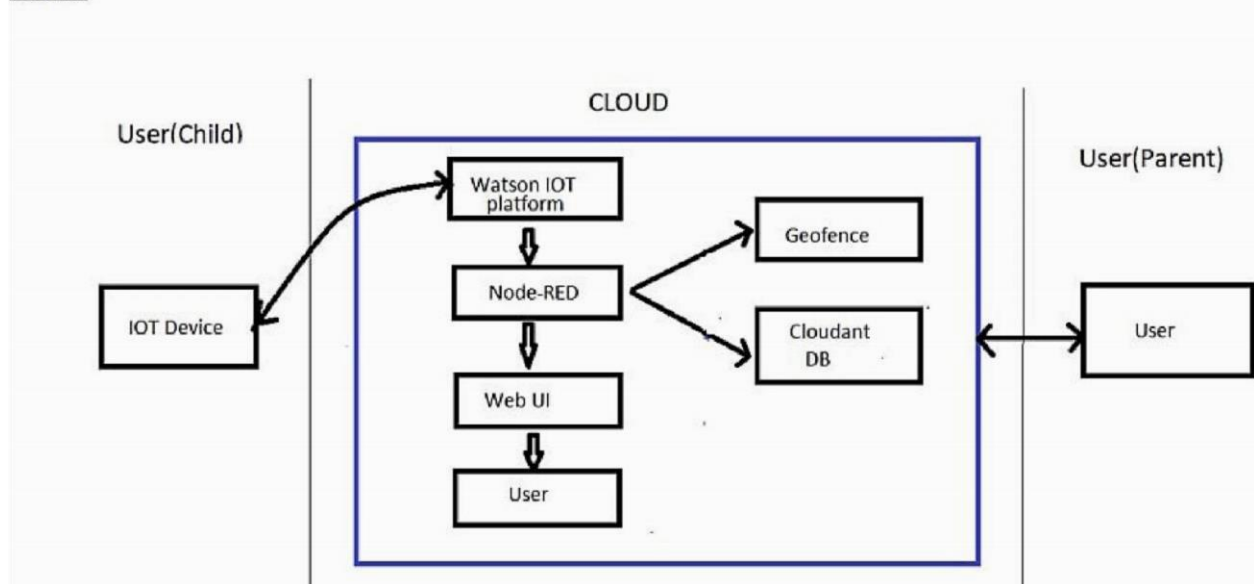

NFR-5	Availability	It must be active for all day and remain active at least a week for a single charge. So, it would be useful for the parents NFR6 Scalability This device ought to have the option to effortlessly change overhaul concurring to change and need in requirements
NFR-6	Scalability	This device ought to have the option to effortlessly change overhaul concurring to change and need in requirements

5.PROJECT DESIGN:-

5.1.Data Flow Diagrams

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored

FLOW:-

5.2.Solution&Technical Architecture:-

Technical Architecture:-

5. 3.User Stories:

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Web user)	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High	Sprint-1

		USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email and click confirm	High	Sprint-1
		USN-3	As a user,I can register for the application through Facebook	I can register and access the dashboard with Facebook Login	Low	Sprint-2
		USN-4	As a user, I can register for the application through Gmail		Medium	Sprint-1
	Login	USN-5	As a user, I can log into the application by entering email and password		High	Sprint-1
	Dashboard	USN-6	As a User, I can view the Dashboard	I can view the locations which is stored in the database of the child	High	Sprint-2
				via dashboard		
Customer Care Executive		USN-7	As a customer care executive,I will detect the problems	I will detect the problems and correct them if the device face any	Medium	Sprint-3
Administrator		USN-8	As an administrator, I ensure the efficiency of the device	I will ensure efficiency, cost, etc	High	Sprint-4

6.PROJECT PLANNING AND SCHEDULING:-

6. 1.Sprint Planning and Estimation:

Product backlog and sprint schedule:-

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1		US-1	Create the IBM Cloud services which are being used in this project.	6	High	Kaviya.A Kobika.G Shanmathii.S Sugashakila.R
Sprint-1		US-2	Configure the IBM Cloud services which are being used in completing this project.	4	Medium	Kaviya.A Kobika.G Shanmathii.S
Sprint-1		US-3	IBM Watson IoT platform acts as the mediator to connect the web application to IoT devices, so create the	5	Medium	Kaviya.A Kobika.G Shanmathii.S Sugashakila.R
			IBM Watson IoT platform.			
Sprint-1		US-4	In order to connect the IoT device to the IBM cloud, create a device in the IBM Watson IoT platform and get the device credentials.	5	High	Kaviya.A Kobika.G Shanmathii.S Sugashakila.R

Sprint-2		US-1	Configure the connection security and create API keys that are used in the Node-RED service for accessing the IBM IoT Platform.	10	High	Kaviya.A Kobika.G Shanmathii.S Sugashakila.R
Sprint-2		US-2	Create a Node-RED service.	10	High	Kaviya.A Kobika.G Shanmathii.S Sugashakila.R
Sprint-3		US-1	Develop a python script to create the geofence and publish the location of the child to the IBM IoT platform	7	High	Kaviya.A Kobika.G Shanmathii.S Sugashakila.R

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-3		US-2	After developing python code, commands are received just print the statements which represents the location of the child	5	Medium	Kaviya.A Kobika.G Shanmathii.S Sugashakila.R
Sprint-3		US-3	Publish Data To The IBM Cloud	8	High	Kaviya.A Kobika.G Shanmathii.S Sugashakila.R

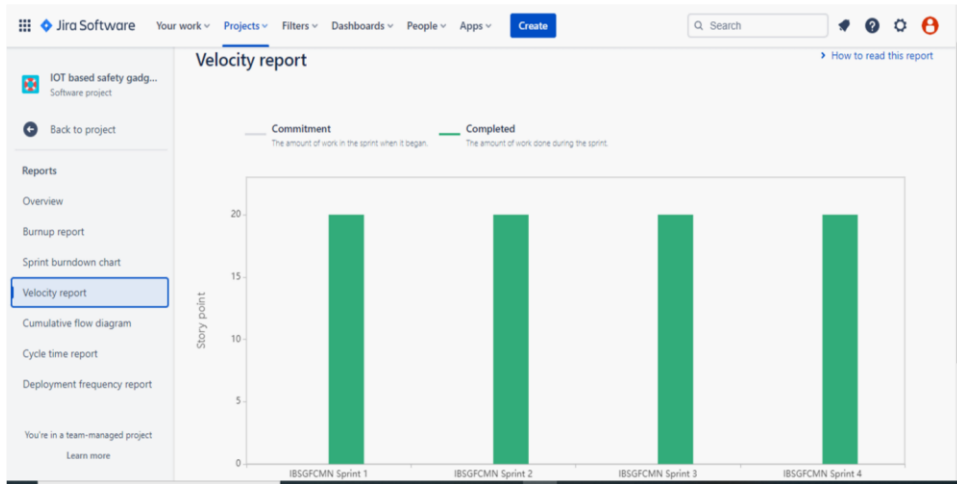

Sprint-4		US-1	Create Web UI in Node-Red	10	High	Kaviya.A Kobika.G Shanmathii.S Sugashakila.R
Sprint-4		US-2	Configure the Node-RED flow to receive data from the IBM IoT platform and also use Cloudant DB nodes to store the received location data in the cloudant DB	10	High	Kaviya.A Kobika.G Shanmathii.S Sugashakila.R

Project Tracker, Velocity & Burndown Chart: (4 Marks)

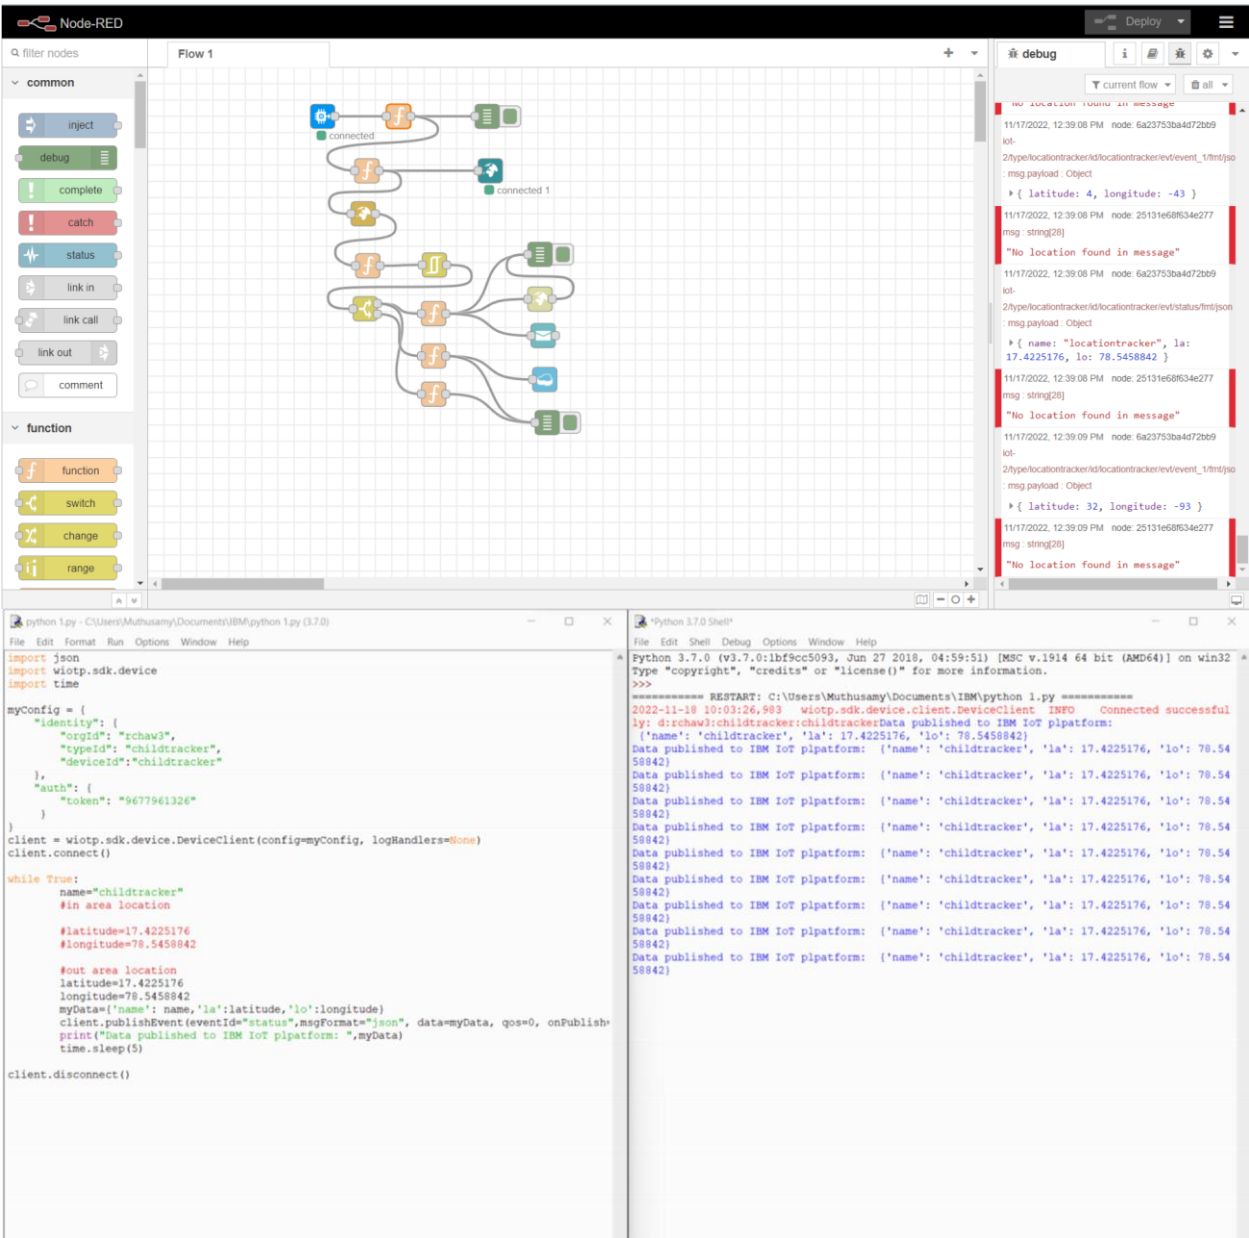

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	05 Nov 2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	20	12 Nov 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	19 Nov 2022

6.3.REPORTS FROM JIRA:-

[Jira report](#)

7.CODING & SOLUTIONING:-

1. Purpose of Document

The purpose of this document is to briefly explain the test coverage and open issues of the [IOT based safety gadget for child safety monitoring and notification] project at the time of the release to User Acceptance Testing (UAT).

2. Defect Analysis

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	8	1	2	3	14
Duplicate	1	0	3	0	4
External	2	3	0	1	6
Fixed	9	2	4	10	25
Not Reproduced	0	0	1	0	1
Skipped	0	0	1	1	2
Won't Fix	0	5	2	1	8
Totals	20	11	13	16	60

3. Test Case Analysis

This report shows the number of test cases that have passed, failed, and untested

Section	Total Cases	Not Tested	Fail	Pass
Print Engine	7	0	0	7
Client Application	51	0	0	51
Security	2	0	0	2
Outsource Shipping	3	0	0	3

UAT Report Te...

Exception Reporting	9	0	0	9
Final Report Output	4	0	0	4
Version Control	2	0	0	2

8.RESULTS:-

a.Performance Metrics:

S.No	Project Name	Scope/feature	Functional Changes	Hardware Changes	Software Changes	Load/Volume Changes	Risk Score
1	Notification on app	New	Moderate	No Changes	Moderate	5 to 10%	ORANGE
2	Fast SMS	New	Moderate	No Changes	Moderate	10 to 30%	ORANGE
3	Node red	Existing	Low	No Changes	Low	5 to 10%	GREEN
4	Cloudant database	New	Moderate	No Changes	Moderate	5 to 10 to 30%	ORANGE

NFT - Detailed Test Plan							
S.No	Project Overview	NFT Test approach	Approvals/SignOff				
1	Python script	Python coding	https://www.python.org/pf/sponsors/wheroku		Depend on the delivered code		
2	Node Red	Geoence and world map	https://nodered.org/		Latitude and longitude		
3	MIT Inventor	Location/ Notification	https://appinventor.mit.edu/about/terms/service		Notifications		
End Of Test Report							
S.No	Project Overview	NFT Test approach	NFR - Met	Test Outcome	GO/NO-GO decision	Identified Defects (Detected/Closed/Open)	Recommendations
1	Python Code	Python coding	Met	Pass	GO	Closed	Efficient code
2	Node Red	geoence and world map	Met	Pass	GO	Closed	Checking the location and proxy file
3	MIT Inventor	Location/ Notification	Met	Pass	GO	Closed	Alert the parent when the child exits

9.ADVANTAGES:-

- 1.It assists parents to continuously monitoring their children remotely.
- 2.In case situations happen,notifications will be sent to parents so that actions can be taken.
- 3.Child safety can be ensured .
- 4.Crime rate will be reduced.

DISADVANTAGES:-

- 1.Wearable devices which are used to locate the children only through Wi-fi and Bluetooth.
2. It causes health issues.

10.CONCLUSION:-

Nowadays,the security for the children is very low. There are a substantial amount of cases registered regarding child safety. In recent times, the schools and the parents are very much worried about their school children for school transport and other places. So, the Safety and monitoring of school children is very much difficult. In this project we are introducing the IOT based embedded system used in this project. So we propose a system to monitor the parameters of the child continuously and also their location for safety purposes. So , this device uses smart child tracking.

11.FUTURE SCOPE:-

The Smart IoT device for child safety and tracking helping the parents to locate and monitor their children. If any abnormal values are read, then an SMS is sent to the parents mobile and an MMS indicating an image captured by the serial camera is also sent. The future scope of the work is to implement the IoT device which ensures the complete solution for child safety problems.

12.APPENDIX:-

Source Code:-

```
import json import
wiotp.sdk.device import time

myConfig = {
    "identity": {
        "orgId": "rchaw3",
        "typeId": "locationtracker",
        "deviceId": "locationtracker"
    },
    "auth": {
        "token": "rW@X48h+v(PA8XnMZM"
    }
}

client = wiotp.sdk.device.DeviceClient(config=myConfig, logHandlers=None) client.connect()

while True:
    name="locationtracker"

    #in area location

    #latitude=17.4225176

    #longitude=78.5458842
```

```
#out area location
latitude=17.4225176
longitude=78.5458842
myData={'name':
name,'la':latitude,'lo':longitude}

client.publishEvent(eventId="status",msgFormat="json", data=myData, qos=0, onPublish=None)
print("Data published to IBM IoT platform: ",myData)    time.sleep(5) client.disconnect()
```
